THE STATE OF HIGH SCHOOL SPORTS IN AMERICA: AN EVALUATION OF THE NATION’S MOST POPULAR EXTRACURRICULAR ACTIVITY

AUGUST 2018

Two Primary Questions

1. Are U.S. public high schools offering fewer opportunities to participate in interscholastic sport?

2. How does involvement in interscholastic sport influence the positive development of adolescents when compared to involvement in other types of extracurricular activities?

Data used comes from:
- Office of Civil Rights Data Collection
- Common Core of Data
- Monitoring the Future survey
High School Sports Participation

The rising trend of U.S. public schools dropping all sport programs has leveled off.

11.3% 1999-2000
22.0% 2009-10
22.7% 2013-14

Percentage of public high schools indicating they did not offer interscholastic sports
High School Sports Participation

Public schools with high levels of poverty continue to struggle with offering any sports to students.

13%

33%
High School Sports Participation

When public schools with high levels of poverty offer sports to students, they offer over a third fewer sports and sports teams.

High School Sports Participation

High-poverty schools experience lower student participation in sports than low-poverty schools.

Participation Rates, 2013-14

- Boys: 52.1%
- Girls: 42.9%

Girls’ participation rates still lag behind boys despite having a similar number of sports and sport teams as boys.
Sports Are More Popular Than Ever

- More boys and girls participated in school sports than any other extracurricular activity.
- Nearly 60% of U.S. 12th-graders were involved in sports, and 40% were involved at a high level.
Athletes Are Highly Engaged in Other School Extracurricular Activities
High Involvement in Sport Yields Academic Dividends

**Highly Involved Athletes**
- Higher grades
- Aspire to graduate college
- Less apt to get into trouble at school

**Slightly/Moderately Involved Athletes**
- Lower grades
- Lower self-ratings of academic ability
- Higher truancy
- Having to attend summer school
Sports are a Psychological Asset for Many Students

Highly Involved Athletes

- Lower rates of depressive affect
- Lower levels of self-derogation
- Higher levels of self-esteem
A Complicated Picture of Sport and Substance Use

Highly Involved Athletes

- Lower risk of cigarette use
- Lower risk of marijuana use
- Lower risk of nonmedical use of prescription drugs
- Higher risk of binge drinking
A Complicated Picture of Sport and Substance Use

Slightly/Moderately Involved Athletes

- Higher risk of binge drinking
- Higher risk of marijuana use
- Higher risk of driving under the influence
Summary of Outcomes

High levels of school-based athletics involvement

- Lower levels of depression
- Higher levels of self-esteem
- Lower levels of self-derogation
- Higher grades
- Greater aspirations to attend college
- Lower risk of truancy and school misbehavior
- Lower risk of academic problems
- Lower risk of cigarette use
- Lower risk of marijuana use
- Lower risk of nonmedical use of prescription drugs
- Higher risk of binge drinking
Summary of Outcomes

Low levels school-based athletics involvement

- Higher risk of truancy
- Lower grades
- Lower self-ratings of academic ability
- Higher risk of binge drinking
- Higher risk of marijuana use
- Higher risk of driving under the influence
Given the positive developmental outcomes of sport —

- Educators, parents, and policy makers should work harder to maintain their sports programs.
- More resources should be put toward sports in schools that serve students of lower socioeconomic class.
- Girls should receive more school sports opportunities.
Given the positive developmental outcomes of sport —

- Future research should try to untangle whether participation rates in private youth sport organizations have increased in recent years due to cuts to interscholastic sports within public high schools.
- Since roughly 31% of students who are involved in school-based athletics identify as being minimally involved, school administrators and coaches may want to make a greater effort to get these minimally involved athletes a greater role in some aspect of the sport they are involved with during the school year.
